4: Scientimed.com -

Description:This is company dynamic website. In that Maintain record of register users from different modules.maintain record of view module,reach count,get all website data from database.

Environment: HTML , CSS, Javascript, JQuery , AJAX , PHP, Codeigniter, MYSQL

Responsibilities:

- design web pages using css/ bootstrap.
- Login page for the particular user .
- User authorization for providing particular functionality to user
- sms gateway integration for sms sending.
- After completing question answer generate dynamic certificate and send on mail.

5: ACME - Agro Chemical Market Estimate

Description:Project is web based application optimally customized for private company. This Project based on maintaining a record of all india fertilizers company for find out a yearly turnover .Calculate panted area/treated area and total sell of fertilizer. In this project using spreadsheet plugin for maintaining a data in excel sheet .

Environment: HTML , CSS, Javascript, Jquery , AJAX , PHP, Codeigniter, handsontable plugin,MYSQL

Responsibilities:

- manage web application using php/codeigniter/ mysql.
- design web application using css/ bootstrap.
- Login page for the particular user .
- Designing Excel sheet for display company/crop/molecule data.
- User authorization for providing particular functionality to user
- sms gateway integration for sms sending.

6: Cheep Care - Admin Panel / Web Services

Description:Project is web based application optimally customized for private company. This Project based on Cheep care and cheep pro App, All API build using codeigniter, managing web portal using codeigniter/mysql,integration of payment gateway, send message and Email ,Send Notification,set scheduler to run cron job,and involves multiple function. GUI Developed using PHP and MYSQL Platform.

Environment: HTML , CSS, Javascript, Jquery , AJAX , PHP, Codeigniter

Responsibilities:

- application page integration with Api's.
- manage web application using php/codeigniter/ mysql.
- design web application using css/ bootstrap.
- Managed updating/deleting of content on panel.
- payment gateway integration.
- sms gateway integration for sms sending.
- set scheduler to run cron jobs

7: Tijara - Web Portal/Website

Description:Project is web based application optimally customized for private company. This Project based on baying and selling property. Add listing,view listing ,manage details of user subscription,integration of payment gateway,send emails and messages to

user,different types of filters,generate invoice and maintain user authorization for view/edit/delete. GUI Developed using Codeigniter and MYSQL Platform.

Environment: HTML , CSS, Javascript, JQuery , AJAX , PHP, Codeigniter, MYSQL

Responsibilities:

- manage web application using php/codeigniter/ mysql.
- design web application using css/ bootstrap.
- Login page for the particular user .
- Managed updating/deleting of content on panel.
- payment gateway integration.
- sms gateway integration for sms sending.

8: Rent Ground WebSite

Environment: HTML , CSS, Javascript, JQuery , AJAX , PHP

Responsibilities:

- Managed and maintained development of Website.
- design website using css/ bootstrap and backend using mysql.
- Add some Plugins according to the client requirement
- Login page for the particular user .
- payment gateway integration.

9: Greenpatti

Description:Project is web based application optimally customized for private company. This Project based on GreenPatti Farmer App, To verify farmer Best deals, Advertise, Generates Reports, Send messages, Send Notification on Android Phone, Registrations, Renewal payment cycle and involves multiple function. GUI Developed using PHP and MYSQL Platform.

Environment: HTML , CSS, Javascript, JQuery , AJAX , PHP,

Responsibilities:

11:Bloodbank

Description : Project is web based application optimally customized for private company. This project based on PHP and MYSQL Platform. In that donor registration, camp information, blood testing, Generate bill, Maintain reports and involves multiple function.

Environment: .HTML , CSS, Javascript, JQuery , AJAX , PHP, Codeigniter

Responsibilities:

- This is a PHP Based Web Application to manage Blood Bank daily record like any ERP System.
- Design Database using mysql and form Design Using Css3/bootstrap
- Using core PHP/Codeigniter build application.

- Integrated import / Export data function in blood bank application
- Managed updating/deleting of content on panel.

12:QuestNation

Description : Project is web based application optimally customized for private company. This project based on School Management Platform. In that Maintain student attendance,student results,Student question answer system,Feedback on solution,Chatting Functionality, Maintain reports and involves multiple function.

Environment: .HTML , CSS, Javascript, JQuery , AJAX , PHP,Codeigniter

Responsibilities:

- Managed and maintained development of PHP backend .
- admin panel according to requirement.
- Front end development and design.
- design mysql database
- codeigniter setup.
- payment gateway integration.

13:QuestNation Website

Description : This Website based on School Management Platform. In that Maintain student attendance,student results,Student question/answer system,Feedback on solution,Chatting Functionality, Maintain point system, Maintain reports and involves multiple function.

Environment: HTML , CSS, Javascript, JQuery , AJAX , PHP, mysql

Responsibilities:

- Managed and maintained development of Website
- Add some Plugins according to the client requirement
- Login page for the particular user .
- provide a functionality to admin to assign some authority through panel .
- payment gateway integration.
- sms gateway integration for sms sending.

14: FarmOnPalm Panel/ Web Services /WebSite

Description:Project is web based application optimally customized for private company. This Project based on Fertilizer Calculator Farmer App, To calculate fertilizers quantity

based on farmer area,provide pesticide information on farmer pest image using image processing, Send messages, Send Notification on mobile, Registrations, Design Yearly calendar of fertilizer dose and involves multiple function. GUI Developed using PHP and MYSQL Platform.

Environment: HTML , CSS, Javascript, JQuery , AJAX , PHP, Codeigniter

Responsibilities:

- application page integration with Api's.
- manage web application using php/codeigniter/ mysql.
- design website using css/ bootstrap and backend using mysql
- implemented import export data functionality for user on Panel
- Managed updating/deleting of content on panel.

15: Field Force Connect WebSite

Environment: HTML , CSS, Javascript, JQuery , AJAX , PHP,Wordpress

Responsibilities:

- Managed and maintained development of Website
- Add some Plugins according to the client requirement
- Login page for the particular user .
- payment gateway integration.
- sms gateway integration for sms sending.
